

BHARAT MOP

(60% Potassium)

Bharat MOP's role in plants

- Bharat MOP is an essential and important nutrient for all crops.
- Bharat MOP increases the activity of enzymes.
- Bharat MOP helps in the transfer of carbohydrates, protein synthesis and maintaining their stability.
- Bharat MOP develops the roots of plants, thereby increasing their ability to tolerate drought.
- Bharat MOP regulates the production and flow of proteins, starch and sugar.
- Bharat MOP increases the ability of plants to fight against diseases, insects and illnesses.
- Bharat MOP increases the frost resistance capacity of plants.
- Bharat MOP helps in proper development of plant cells and prevents them from falling.
- Bharat MOP improves crop yield and quality.

Damage due to lack of potash in plants

- Leaves become small, thin, dry towards the ends, turn brown and curl up.
- The growth of upper buds in plants stops.
- Stem becomes weak and plants fall easily.
- Seeds and fruits wither and the quality of the produce decreases.
- The possibility of disease in the crop increases.

Lakhs of farmers from different states are adopting Bharat MOP and taking advantage of it.
